

Unique Features

- Recipes based off items you have in the fridge
- Could suggest healthier alternatives to the items already in the fridge
- Tell user's where to get certain items when they are running out
- User's could rate recipes, and an algorithm could calculate averages and suggest highly rated ones to user's
- Suggest recipes based on dietary restrictions
- Suggest recipes based off of time of day
- Suggest recipes based on time they have available to cook
- Suggest recipes based on number of people needed to cook for
- Algorithm could detect items that are low in capacity and then automatically add them to the shopping list
- Could 'scan' or recognise an item and the app could tell the user what food they could make with it
- Could introduce recipes restricted by budget for the meal
- Could detect food going out of date and give a suggestion of a recipe based on that
- Could persuade user to donate food to local food banks in the area if is going out of date soon
- Could suggest recipes and quantities based on how 'hungry' they are
- Could have a family favourites section, which reminds user to buy favourite food for family members and push this to the main 'shoppers' list – this would mean registering 'family groups' as in one user main and the rest just members
- Could vote on what to eat together and off that cook food on a majority vote
